

# FlowHawk™ for Kids First and Only Pediatric Organ Intake Management Solution

Purpose-built for pediatric transplant centers to ensure the smallest patients have the best care

## Clinical Workflow Automation: Organ Intake Management

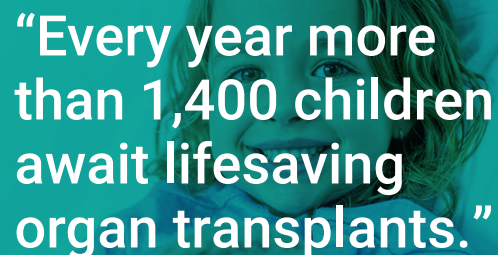

When a precious organ does become available, decisions to proceed with transplant are complex, ultimately based on the alignment of transplant team experience, clinical assessment, and organ availability.

OmniLife Health is the first and only Pediatric organ intake management platform purposebuilt for Pediatric transplant centers. We have helped facilitate over 12,000 organ transplants through our purposebuilt clinical workflow automation platform focused on streamlining clinical communications and collaboration for complex care environments.

The SaaS based platform is HIPAA compliant, reliable, and work with top ranked pediatric transplant centers to highly configurable to manage multiple use cases. We help save more lives and scale the platform into other care settings within hospital and health systems.

### About OmniLife Health

OmniLife Health's flagship clinical workflow automation platform – FlowHawk – accelerates optimal health outcomes by simplifying and standardizing complex care pathways and encouraging purposeful collaboration across the enterprise.

“Every year more than 1,400 children await lifesaving organ transplants.”

OmniLife Health is leading efforts to improve communication between all partners involved in the organ transplantation process. We are proud to be a partner with the Starzl Network for Excellence in Pediatric Transplantation, led by UPMC Children's Hospital of Pittsburgh, to help drive innovation around transplant graft selection and acceptance, specifically with the goal of reducing pediatric waitlist mortality.
